

SIMTAC (Simulation and Integrated Medical Training Advancement Centre)

Scenario Development Worksheet

1. Course and Trainee Information

Course title	Resuscitation Drill
Department	Level 13
Scenario	1
Target learner group	RN, EN, CSA
No of trainees for this scenario	4
No of instructors for this scenario	2
Level of experience	Intermediate / Advanced
Pre-requisite knowledge	BCLS / LSCN trained

2. Specific Learning Objectives

In this scenario, the team is expected to:

1	Recognise early signs of deterioration
2	Correct escalation to the medical team on patient's condition
3	Coordinate with each other to perform an effective resuscitation
4	Perform resuscitation skills with confidence

3. Clinical / Environment Setting

Setting required	Remarks
General ward	

4. Instructor Information

1	
---	--

5. Confederate Information

1	
---	--

6. Trainees Role

1	Nurse 1: Discover patient / AED Nurse 2: CPR Nurse 3: Airway Nurse 4: Runner
---	---

7. Patient Information

Name:	David Ng			☐ Show information on monitor before starting scenario ☐ Make information available during the simulation
ID No. / NRIC	S1234567B	Race:	Chinese	
Age:	62	Gender:	Male	
Weight:	70	Height:	170	
Past medical and social history	Social History: Lives alone, smoker, 10 pack/years Past Medical History: COPD			

SIMTAC (Simulation and Integrated Medical Training Advancement Centre)

Current medications	• Spiriva Respimat 2 puff OM • Acetylcysteine OM • Prednisolone 30mg OM • 1:1:2 Nebuliser Q6H • IV Augmentin Q8H • Montelukast ON	
Food/drug allergies	Nil	
Primary care provider	RCCM	
History of presenting complaint	Acute exacerbation of COPD	

8. Scenario Information

Time allocated for scenario	
Time allocated for debrief	
Scenario summary	David Ng, a 62-year-old male, was admitted to the hospital for an acute exacerbation of his COPD. He was being managed in a general ward with bronchodilators, corticosteroids, antibiotics, and supplemental oxygen 2L/min. On the third day of hospitalization, David began to experience increased shortness of breath, confusion, and cyanosis.
Scenario information to trainees	Nurse 1 attended to patient to serve scheduled nebuliser
To move to the next state	☐ Next ☐ Auto ☒ Handler

9. Scenario Flow

State	Vital signs	Physical exam	Inv	Expected actions	Remarks	Instructor Control
Alert	BP: 100/52 PR: 113 RR: 32 SPO2: 68% Rhythm: Sinus Tachycardia	Increased shortness of breath Confusion Cyanosis	Check vitals signs	- Increase supplement oxygen - Perform ECG - Check CLC - Call doctor		
Unresponsive	BP: 65/30 PR: 38 RR: 2 SPO2: 0% Rhythm: PEA	Gradual cessation of breathing	Check vital signs Check pulse	- Observed that patient has become unresponsive - Active code blue - Pulseless - Start CPR		

SIMTAC (Simulation and Integrated Medical Training Advancement Centre)

				- Once e-trolley arrives, apply AED - Insert OPA and start bagging - Call code blue team		
Unresponsive	BP: 0/0 PR: 0 RR: 0 SPO2 0%: Rhythm: VF	No pulse No breathing	Analyse rhythm	- Ensure everyone stand clear, oxygen away, eyes on rhythm before shock - Continue 2 min CPR - Prepare drugs / intubation - SBAR when Dr arrives		
Unresponsive	BP: 0/0 PR: 0 RR: 0 SPO2: 0% Rhythm: VT	No pulse No breathing	Analyse rhythm Check pulse	- Pulseless - Ensure everyone stand clear, oxygen away, eyes on rhythm before shock - Continue 2 min CPR - Assist in intubation - Administer drugs as ordered		
Unresponsive	BP: 79/52 PR: 64 RR: 12 SPO2: 100% Rhythm: Sinus rhythm	ROSC Return of spontaneous breathing	Check pulse Check vital signs Do blood investigations Call CXR	- Pulse present - Administer IV Dopamine / IV drip - Prepare transfer to ICU		

10. Equipment

Category	Item	Quantity	Remarks
Airway and breathing	ETT set	1	
	Nasal prong	1	
	Non-rebreathable mask	1	
Intravenous fluids	Normal saline	1	
	Dextrose 5%	1	
Medications	E-Kit	1	

SIMTAC (Simulation and Integrated Medical Training Advancement Centre)

Personal			
Monitoring	Blood pressure monitor	1	
	ECG	1	
	Zoll Defibrillator	1	
Diagnostic			
Investigations			
Moulage			
Other equipment			

SIMTAC (Simulation and Integrated Medical Training Advancement Centre)

11. Debrief Information

No of debriefers	1
Debrief room set up, if required	Yes
Debrief description	10 chairs
Logistics required e.g markers, flipchart	Whiteboard, Markers

12. Simulator / Standardised Patient / Task Trainer Preparation

1	
---	--

13. Patient Monitor Setup

Monitor Layout	☐ 5 waveform ☐ 4 waveform ☐ 3 waveform ☐ Big Num layout	
Parameters	☒ Primary Electrocardiogram ☐ Secondary Electrocardiogram ☐ ABP - Arterial Blood Pressure ☒ SpO ₂ (Plethysmogram) – Oxygen saturation ☐ PAP - Pulmonary Artery Pressure ☐ CO ₂ – End-tidal Carbon Dioxide ☐ pH – Aterial pH ☐ CVP - Central Venous Pressure ☒ NBP- Non-invasive Blood Pressure ☐ TOF - Train Of Four	☐ N ₂ O - Nitrous Oxide ☐ O ₂ - Oxygen pressure ☒ Pulse ☐ WP – Wedge Pattern ☒ RR - Airway Respiration Rate ☐ C.O. - Cardiac Output ☐ TPeri - Peripheral Temperature ☐ Tblood - Invasive blood temperature ☐ ICP - Intracranial pressure ☐ AGT – Agent ☒ HR- Heart Rate

Note: A maximum of 5 waveforms and 14 numeric parameters can be shown at the same time. Both waveform and numeric are displayed together.

14. Document Information

Author	Fatin Nadiah
Designation	ANC
Department	13B
Date scenario developed	4/3/2025
Date scenario updated
